SlipSafe

Anti-Slip Gloss Sealer

A clear, high-gloss sealer that enhances surface shine while improving slip resistance and long-term protection. Perfect for polished concrete, stone, and decorative floors indoors.

0508 754 778 INFO@SLIPSAFE.CO.NZ SLIPSAFE.CO.NZ

Product overview

SlipSafe's Anti-Slip Gloss Sealer delivers the ideal balance of aesthetic appeal and safety. It adds depth and gloss to decorative or polished floors while embedding a fine traction layer that helps prevent slips on wet or high-traffic surfaces.

Did you know?

- Thousands of slip accidents in New Zealand happen on sealed or polished surfaces where shine reduces friction.
- Many businesses polish floors for appearance but lose compliance under the NZ Standards unless a certified anti-slip finish is applied.

Key Benefits

- High-gloss finish – enhances depth and visual appeal
- Certified traction – improves traction on high gloss tiles and surfaces
- Durable protective layer – guards against wear, stains & moisture
- Fast application & dry time – minimal business downtime
- Low-maintenance shine – easy to clean and re-coat as needed
- Applied nationwide – by SlipSafe certified technicians

How it works & why choose slipsafe

How It Works

SlipSafe's Anti-Slip Gloss Sealer is a high gloss blend that forms a crystal-clear film over the surface. Microscopic particles within the sealer increase friction without dulling the gloss, delivering an elegant finish that looks polished yet performs safely.

Our technicians prepare the surface, apply the sealer with professional equipment, and verify slip ratings to ensure compliance. Floors can typically reopen to foot traffic within hours.

Maintenance & Longevity

The Gloss Sealer provides a long-lasting protective film that resists dirt and stains while maintaining its brilliant finish. Routine cleaning with SlipSafe Green Cleaner keeps the surface clear and safe. When the shine begins to fade, a quick re-coat renews appearance and slip resistance without stripping the existing layer.

Get Ahead of an Accident

High-gloss surfaces can be deceptively slippery, especially after cleaning or spills. By sealing your floors with SlipSafe before an incident occurs, you maintain style and safety in equal measure, reducing both people and property from avoidable risks.

Why SlipSafe

- Trusted by councils, schools & commercial facilities nationwide
- Meets New Zealand Standards for slip ratings
- Available in gloss sheen
- Free on-site slip assessment & sample application available
- NZ owned & operated

SlipSafe NZ is New Zealand's leader in anti-slip coatings and compliance solutions, delivering surfaces that look as good as they perform.

SlipSafe

Anti-Slip Transparent Coating

A clear, high-performance coating that dramatically improves slip resistance without changing the natural look of your surface. Perfect for any floor surface - indoors or outdoors.

0508 754 778 INFO@SLIPSAFE.CO.NZ SLIPSAFE.CO.NZ

Product overview

Invisible Protection. Visible Safety.

SlipSafe's Anti-Slip Transparent Coating delivers reliable grip while maintaining the original beauty of your flooring. Designed for high-traffic commercial spaces and stylish residential areas, it provides an invisible, long-lasting shield against slips and falls.

Did you know?

- Slips, trips and falls are one of New Zealand's most common cause of workplace injuries, costing over $1.5 billion annually in ACC claims.
- Thousands of Kiwis are injured each year due to slip-related incidents on smooth or wet surfaces.

Where It's Used

- Indoor tiles & polished concrete
- Retail & commercial foyers
- Bathrooms & pool surrounds
- Schools, hospitals & aged-care facilities
- Any area needing added grip without changing its appearance

Key Benefits

- Completely clear finish – preserves your surface's natural look
- Certified performance – CSIRO tested & compliant to New Zealand standards
- Fast drying- minimal downtime giving you peace of mind when completed
- Durable & chemical resistant – built for heavy foot traffic
- Easy maintenance – Simple to follow cleaning and maintenance processes
- Nationwide support – applied by certified SlipSafe technicians

How it works & why choose slipsafe

How It Works

Using advanced polymer technology, the coating bonds microscopically to the surface, forming a transparent, textured layer that increases traction even when wet. It remains flexible yet tough, delivering dependable slip resistance without visual change to the aesthetics of your floor.

Our trained SlipSafe technicians apply the product using professional equipment for consistent coverage and finish. Most floors can reopen within hours of treatment.

Maintenance & Longevity

This coating provides years of reliable grip under normal conditions. Routine cleaning with SlipSafe Green Cleaner maintains clarity and performance. When required, a new coat can be applied without any damage to your flooring.

Get Ahead of an Accident

A single slip can cause serious injury, costly liability, and reputation damage. SlipSafe helps you stay proactive - not reactive - by preventing accidents before they happen and ensuring your spaces meet NZ safety standards.

Why SlipSafe

- Trusted by councils, schools & aged-care facilities nationwide
- Certified to NZS 4586 with independent CSIRO testing
- Free on-site slip assessment & sample application available
- NZ owned & operated

SlipSafe NZ is New Zealand's leader in anti-slip treatments and compliance testing - helping create safer environments for everyone.

SlipSafe

Anti-Slip Coloured Coating

A durable, decorative safety coating that enhances floor grip and transforms tired surfaces with a fresh, vibrant finish. Designed for long-term protection in commercial, industrial, and outdoor environments.

0508 754 778 INFO@SLIPSAFE.CO.NZ SLIPSAFE.CO.NZ

Product overview

Safety Meets Style

SlipSafe's Anti-Slip Coloured Coating provides a tough, slip-resistant surface with a coloured finish that enhances visibility, safety, and appearance. Ideal for areas where traction and aesthetics are equally important, it delivers reliable performance in high-traffic or weather-exposed environments.

Did you know?

- A large percentage of slip-related injuries in New Zealand occur on outdoor surfaces that have worn smooth over time.
- Many commercial and public sites replace entire floor areas each year when a professional anti-slip coating would restore compliance at a fraction of the cost.

Where It's Used

- Driveways and ramps
- Retail entries and loading zones
- Workshops & warehouses
- Pool surrounds and walkways
- Exterior balconies and stair treads

Key Benefits

- Coloured finish options – custom tones for visibility and design impact
- CSIRO tested & NZ Standards compliant – proven safety results
- Highly durable – resists weather, UV and chemicals
- Fast application and dry time – minimal downtime for businesses
- Easy to clean and maintain – keeps surfaces looking fresh
- Nationwide application team – SlipSafe certified technicians

How it works & why choose slipsafe

How It Works

SlipSafe's Coloured Coating combines premium pigments with a durable resin binder to form a protective, textured film over the floor surface. Micro aggregates within the coating create a grip layer that remains effective even in wet or oily conditions. Once cured, the coating provides a long-lasting anti-slip barrier that won't peel or fade under UV exposure.

Our certified technicians apply the coating with specialised rollers and equipment for an even texture and professional finish.

Maintenance & Longevity

This coating is engineered for longevity under harsh conditions. Regular cleaning with SlipSafe Green Cleaner preserves colour vibrancy and traction. When needed, we can simply strip back the worn coating and reapply a new coating without damaging the floor surface under the antislip coating.

Get Ahead of an Accident

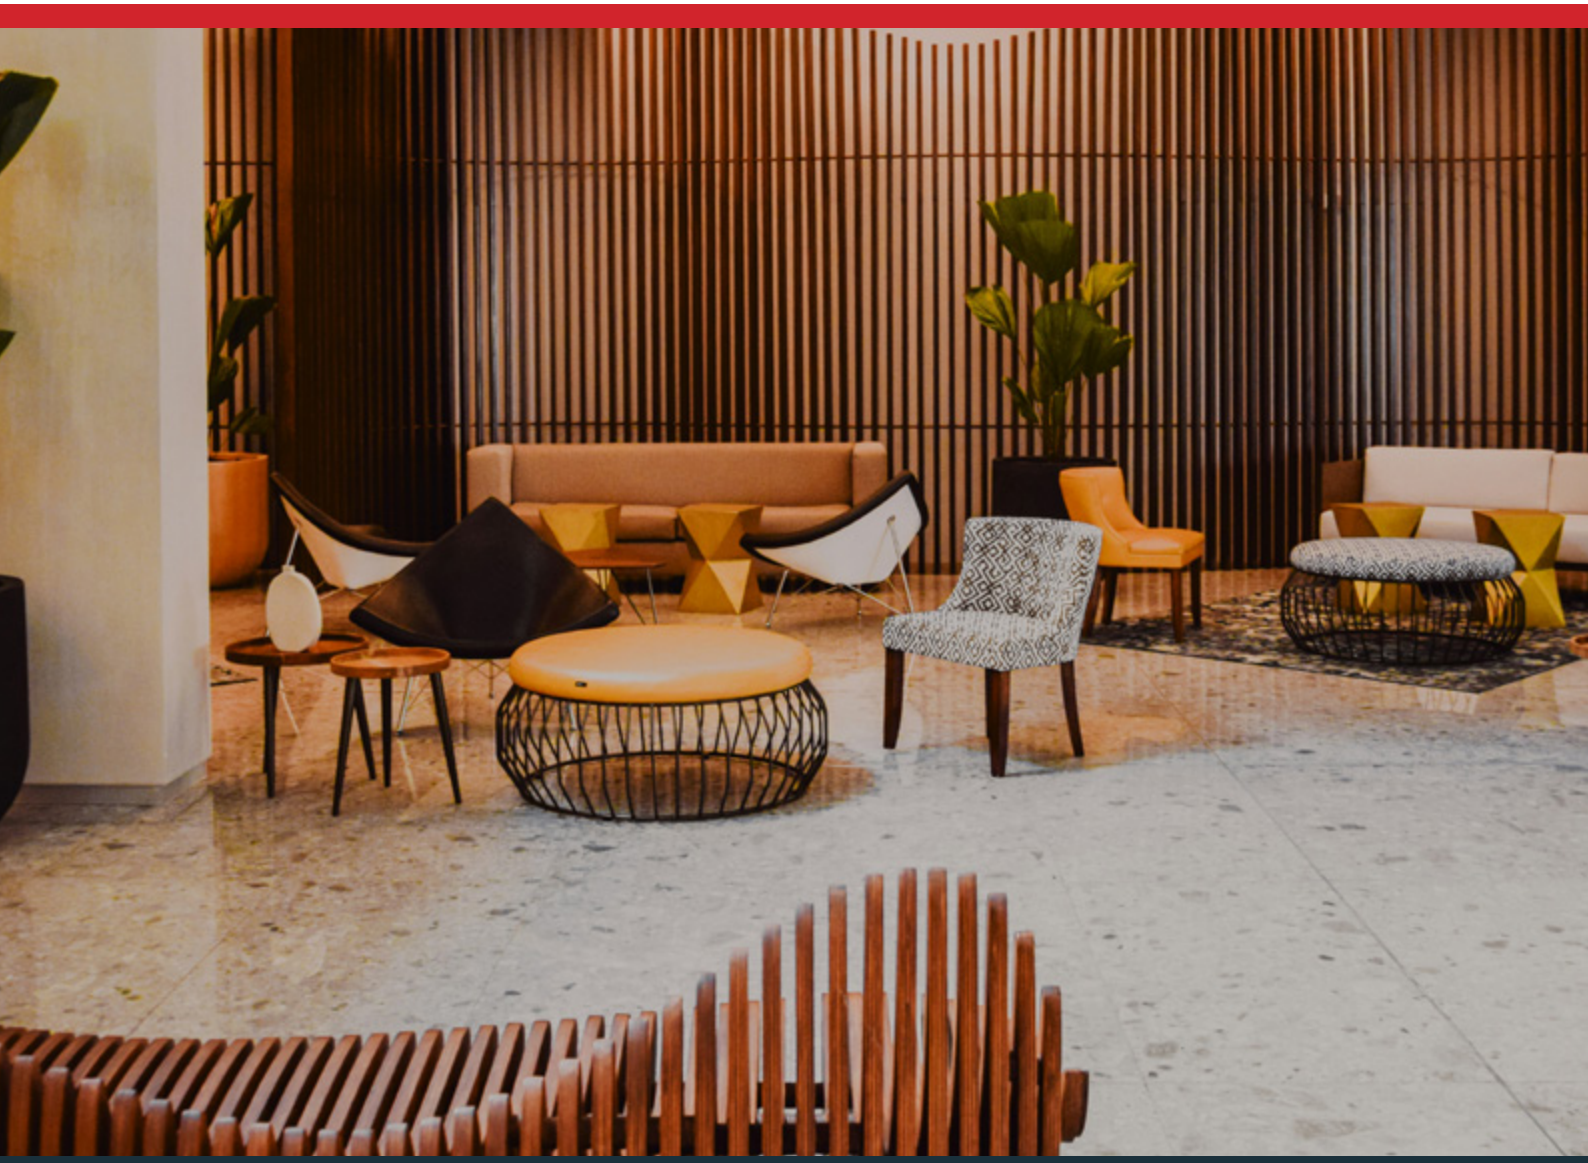
Faded or smooth surfaces are an accident waiting to happen. Re-coating with SlipSafe before a slip occurs safeguards your people, your brand reputation and your budget, delivering visible safety and peace of mind.

Why SlipSafe

- Trusted by councils, schools & facility managers nationwide
- Certified to NZS 4586 with independent CSIRO testing
- Wide range of colours and texture options to suit any environment
- Free on-site assessment & sample application available
- NZ owned & operated

SlipSafe NZ leads the nation in anti-slip treatments and compliance testing, combining safety with design for spaces that look great and perform better.

SlipSafe



TerraGrip Anti-Slip Treatment

A professional chemical treatment that microscopically textures tiles and stone surfaces to create permanent wet-area grip without altering their appearance. Ideal for porcelain, ceramic, concrete and natural stone floors.

0508 754 778 INFO@SLIPSAFE.CO.NZ SLIPSAFE.CO.NZ

Product overview

SlipSafe's TerraGrip Anti-Slip Treatment chemically changes the surface to create an invisible micro-texture that dramatically improves traction when wet. Unlike coatings, TerraGrip becomes part of the floor itself, delivering years of proven safety.

Did you know?

- Smooth tiles and stone and concrete are responsible for a large number of slip injuries in public buildings and spaces across New Zealand.
- Many of these accidents occur in entrances, bathrooms, and pool surrounds where a wet surface dramatically reduces traction - even when "non-slip" tiles are installed.

Where It's Used

- Porcelain, ceramic & natural stone tiles
- Entrances, bathrooms, and pool surrounds
- Foyers, restaurants & hospitality areas
- Shopping centres, hospitals & retirement villages
- Any wet-area flooring needing lasting traction

Key Benefits

- Permanent micro-etch finish – becomes part of the tile surface
- Maintains original look – doesn't change the look of the surface
- Immediate results – usable within minutes of application
- Tested & compliant – meets New Zealand standards for slip ratings
- Low-maintenance – no film build-up or peeling over time
- Applied nationwide – installed by certified SlipSafe technicians

How it works & why choose slipsafe

How It Works

TerraGrip uses a controlled reactive process that lightly etches the silica compounds in tile and stone surfaces. This microscopic network of pores increases surface friction when wet, creating a strong yet invisible anti-slip profile.

SlipSafe technicians assess the surface type, apply the treatment precisely, neutralise and seal it (if desired) then and verify performance through slip testing on site. Most treated areas can be walked on within minutes.

Maintenance & Longevity

Because TerraGrip permanently alters the surface, its performance comes backed with a 5 year warranty. Routine cleaning with SlipSafe Green Cleaner keeps pores clear and traction consistent.

Get Ahead of an Accident

Bathrooms, foyers and pool areas are high-risk slip zones. One accident can cost thousands in injury claims or lost reputation. Treating surfaces proactively with TerraGrip helps you stay compliant and confident before problems occur.

Why SlipSafe

- Trusted by councils, schools & facility managers nationwide
- Certified to NZS 4586 with independent CSIRO testing
- Wide range of colours and texture options to suit any environment
- Free on-site assessment & sample application available
- NZ owned & operated

SlipSafe NZ leads the nation in anti-slip treatments and compliance testing, combining safety with design for spaces that look great and perform better.

SlipSafe

Anti-Slip Rubber Spray Coating

A semi-flexible, rubberised coating that creates a high-grip, cushioned surface for wet or uneven areas. Ideal for ramps, stairs, pool surrounds, loading zones, and playgrounds, anywhere safety and comfort underfoot matter.

0508 754 778 INFO@SLIPSAFE.CO.NZ SLIPSAFE.CO.NZ

Product overview

SlipSafe's Anti-Slip Rubber Spray Coating delivers a resilient, slip-resistant finish that grips in all weather conditions. Its rubberised texture provides traction, impact absorption, and durability on virtually any surface - concrete, timber or metal.

Did you know?

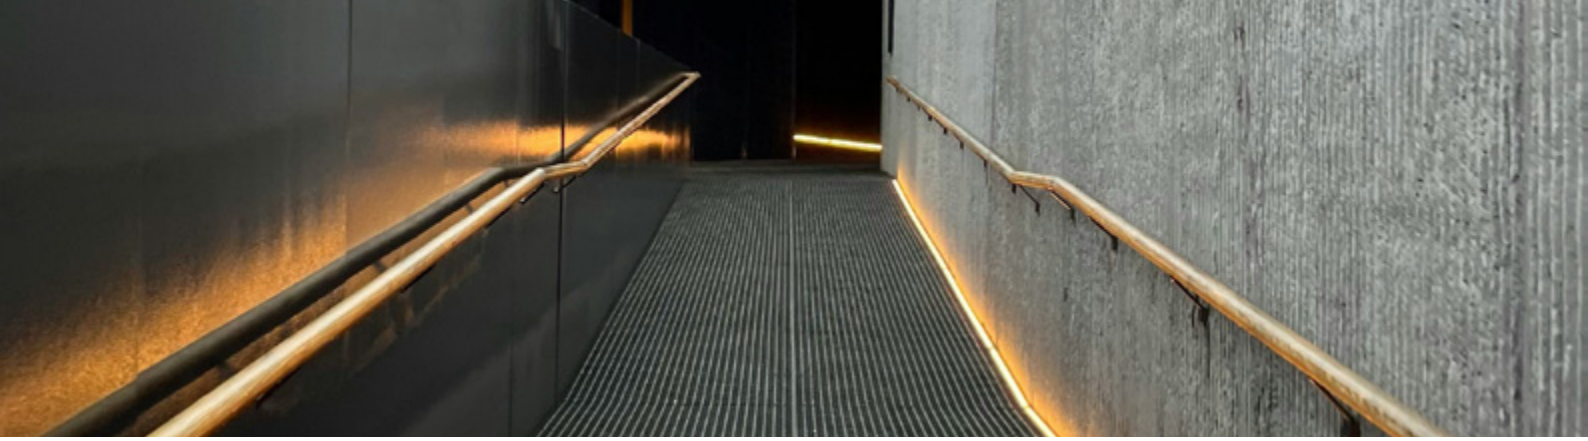
- Outdoor surfaces account for a significant number of serious slip injuries in New Zealand.
- A large number of slip incidents occur on ramps, stairs and entryways, areas that can be made safer in a single day with a professional spray application.

Where It's Used

- Exterior ramps, stairs & loading bays
- Playgrounds & recreational areas
- Footpaths and schools
- Decks & patios
- Industrial work zones & accessways

Key Benefits

- Flexible rubberised texture – conforms to uneven surfaces
- Exceptional wet & dry grip – designed for year-round safety
- Durable & UV-resistant – resists cracking, peeling and fading
- Fast-curing system – ready for light use within hours
- Comfort underfoot – reduces noise and impact
- Professional nationwide application – by certified SlipSafe technicians



How it works & why choose slipsafe

How It Works

The Anti-Slip Rubber Spray Coating uses a premium elastomer formula that's spray-applied to form a tough, flexible membrane. Within the coating, recycled rubber shoe soles create a textured surface that enhances grip and durability while absorbing minor movement or vibration.

The coating bonds strongly to most substrates including concrete, wood, metal and composite materials. Our trained technicians apply the product using professional spray and Roller systems for an even, seamless finish that protects against moisture and abrasion.

Maintenance & Longevity

SlipSafe's rubber coating is built to last in high-traffic or outdoor conditions. Simple cleaning with SlipSafe Green Cleaner removes dirt and debris, preserving traction. If needed, the surface can be easily refreshed with an additional light spray coat, restoring its original look and performance.

Get Ahead of an Accident

Slippery outdoor access areas pose serious risk for staff, visitors and the public. A single accident can lead to injury claims and costly downtime. SlipSafe's spray coating offers a fast, effective way to eliminate those risks before they happen, with long-term, weather-proof protection.

Why SlipSafe

- Trusted by councils, schools & facility managers nationwide
- Compliant with New Zealand slip resistance standards
- Colour options available
- Free on-site assessment & sample application available
- NZ owned & operated

SlipSafe NZ leads the nation in anti-slip innovation. Delivering durable, flexible safety coatings that keep Kiwis on their feet.
